Space for parking automobiles is a limited resource that requires oversight to improve access to urban centers, balance the needs of both users and competing demands for the space, improve safety, and enhance user experience. Modern downtown parking challenges range from legacy issues to imagining future problems and trying to prepare for them, all while working toward more "green" parking. Today, technology must be used to obtain the highest efficiency in parking, transportation, and mobility. New parking facilities must be built with adaptive reuse in mind, and some cities are already converting parking structures to people-oriented uses, such as office space or residential units. Downtowns must also confront handicap placard abuse, prepare for the possibility of widespread autonomous vehicles, and balance stakeholder parking desires with a shift away from single-driver environments. Public and private entities often work together to manage parking in a downtown. There are pros and cons to either arrangement, but oftentimes, tough changes are needed for the betterment of the entire downtown. Downtowns are often faced with the challenge of converting private parking to public (or shared use) parking for greater efficiency. Further, while parking pricing evokes impassioned debates, it remains a key variable in a place-based parking system management.

Success stories from:
1. Tempe, Arizona
2. Boulder, Colorado
3. Old Pasadena, California

The goal of this IDA Top Issues Council report is to address the broad menu of parking challenges downtowns must face as they function today and plan for the future. The reader of this report should be able to better understand competing priorities related to parking, identify items to consider when addressing common parking issues, and find some best practices to research further. This report will also highlight three success stories from downtown Tempe, downtown Boulder, and Old Pasadena to offer lessons learned from real-life scenarios and provide takeaways that readers can apply to their own downtowns.
